Constructor Details

CsvReader

```
public CsvReader()
```

Method Details

startRead

```
public static void startRead(String  pathname)
                      throws FileNotFoundException
```

Initialise a read from a CSV file.

Parameters:

pathname - The location of the CSV file to be read

Throws:

FileNotFoundException - File was not found at pathname

endRead

```
public static void endRead()
```

End the CSV file read.

nextRow

```
public static String [] nextRow()
```

Read the next row of strings in the CSV file.

Returns:

An array containing the next row where each element is a column of the row in string format.

nextDoubleRow

```
public static double[] nextDoubleRow()
```

Read the next row of doubles in the CSV file.

Returns:

An array containing the next row where each element is a column of the row in double format.
